They paved our driveway 5 years ago and still looks amazing - great job and they always get recommended to our friends.

*Azlid Kwah*

Absolutely the best paving company out there!!

*Shane Bartlett*

They did the driveways and parking lot at the building I live in.

Totally professional, and did an excellent job!

*Linda Napert*

Matt and the guys did my driveway a few years back, 100% professional . They did a fantastic job!!!

*Anthony Leca*

Matt, did a great job on our driveway in Southington. Remember one thing cheap work is not good and good workmanship is not cheap. Best paving company by far. Just ask around.

*Michael S. Lanzo*

I highly recommend Deziel Paving, excellent professional job at a fair price.

*Jon Pose*

Deziel did an exceptional job on my Mom's driveway. Smooth transition from the street to the driveway & from the driveway to the garage.

Totally professional.

*Jean Beck*

Thank you for all your hard work on both driveways, your crew was very pleasant and professional, and they worked nonstop till the job was complete. Your office staff was also very kind and professional throughout the process. The finished product looks fantastic. I would be happy to be used as as referral for any future jobs as well as recommend your services as much as possible.

Thank you again for everything,

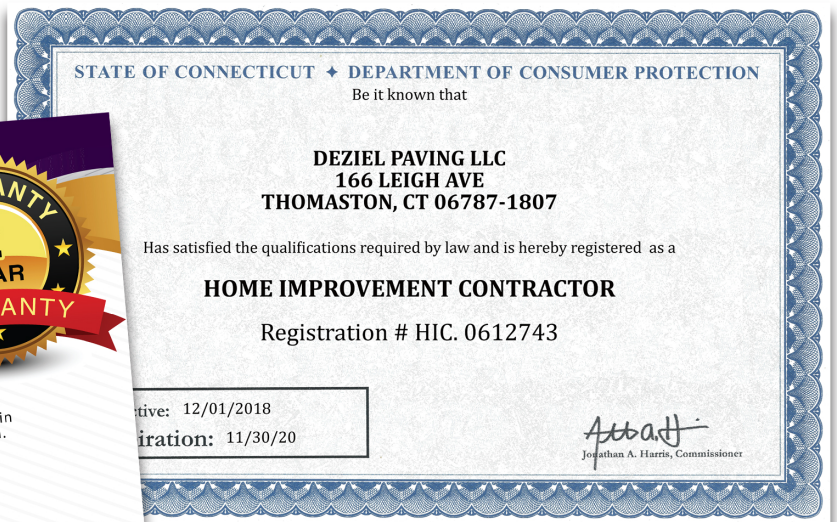

*Michael Marsh*

# We're legit...

Beware of low prices- there is always a reason that a price is too low.  
ALWAYS check if the company is insured,  
if they use the right amount of asphalt thickness when paving (2.5 inches)  
or if they even are a licensed contractor

## How to choose a paver

**If your driveway needs repair. Find a local paving contractor.  
Don't fall for pitches delivered door-to-door.**

Verify that the contractor you hire is registered in Connecticut as a home improvement contractor by contacting the Department of Consumer Protection.  
Get the contractor's certificate of insurance liability and workman's compensation coverage from the contractor's insurance provider.

Check with your town for any required permits and have them in place before work begins.

- Have your contractor provide all warranties in writing.
- Always get a signed and dated contract for paving work, since it will protect you from potential damages or misunderstandings. According to state law, the following must be included in writing:
  - The date the contract was signed
  - A start date and end date for the job
  - The price (you can request that labor and material be broken out separately)
  - The contractor's name, address and home improvement contractor number
  - A 3-day Notice of Cancellation that allows you 72 hours to change your mind, along with clear instructions on how to contact the company to cancel that contract.

# How to care for your new driveway

**Congratulations on choosing Deziel Paving as your paving contractor.**

**Here are a few things you can do to care for your new asphalt driveway.**

- Asphalt needs 6-12 months to harden and cure, until then it will remain somewhat soft and pliable. You can walk on your new driveway immediately, but keep automobile traffic off it for at least 3 full days, up to a week in hotter weather.

- Your new asphalt will soften and harden as temperatures rise and fall. Watering down your drive will cool and temporarily harden the asphalt, but is not necessary. If you do water it, do not be alarmed if you see some soap suds appearing. This is a reaction between the diesel fuel found in the asphalt and a high chlorine content found in some city water. Although every effort is made to avoid puddles in your driveway, some small ones are inevitable depending on the natural slope and drainage of your ground.

- Your new driveway will be scarred by cars starting too fast, pulling in too quickly, turning around in tight areas and just plain driving too fast.

- During the time your driveway is curing, do not park in the same spot each day and avoid turning your steering wheel back and forth when your car is not moving. Doing these things can result in indentations and scarring of the asphalt.

- Do not use jack stands or car ramps without a piece of plywood placed under them to distribute the weight.

- Excessive weight from large heavy vehicles can depress your new driveway. Keep oil, concrete and any other heavy trucks off of your new asphalt. If storing a camper or boat for a long period of time, place plywood under the tongue jack and under the tires.

- The following can cause holes and depressions in your new driveway: lawn chairs, bike and motorcycle kickstands, pointy high heel shoes, sports shoes with cleats.

- Should a weed grow up through the asphalt, spray it with a weed killer.

- Because the edges of the driveway are the weakest part, avoid driving on the edges as they will crack and crumble in time. We recommend building up the sides of the drive with topsoil to approximately 1" from the top to allow room for sod growth and water drainage. This will support the edges and enhance the appearance after grass has grown.

- Avoid spilling gasoline, oil, anti-freeze, power steering or transmission fluid on your asphalt. Should a spill occur, make a solution of mild dish detergent mixed with water (we find Dawn works well) and clean the area with a push broom. If a hole is left by any of these fluids it should be filled with cold patch.

- Any cracks that may develop in asphalt due to the contraction and expansion of the asphalt over the winter, or for any other reasons, should be filled with crack filler. This can be purchased from your local building supply store or can be professionally applied by a contractor.

- **Deziel Paving does not recommend seal coating of your asphalt, but if you choose to sealcoat your driveway do not do so any sooner that 2 years from the time of paving.**

# Homeowners Checklist:

- If your driveway is gravel, please apply weedkiller at least 24 hours prior to work. We will make every effort to remove weeds, but they may push through the asphalt if left untreated
- Please trim hedges and bushes in the work area
- The driveway can be driven on after prep work is completed until it is paved
- On the day of the paving, we will need garage doors open and a water supply. We will close the garage doors when finished
- Please clear a 6' area in your garage to park the roller during paving
- There is a small area of grass disturbed between the driveway and the lawn. This area should be backfilled and seeded once the paving is complete
- If your driveway has a slope, it is most important to backfill and seed this area immediately, as water will run off driveway and undermine it
- Your new driveway will be flush with the garage floor unless instructed otherwise
- Some areas of your new driveway will have different textures from others
- Vinyl siding that makes contact with the driveway may warp from the temperature of the asphalt
- After Paving, please keep off the driveway for one week.

We cannot guarantee water will flow off the driveway unless there is at least a 2% pitch  
We will install stakes and caution tape to barricade driveway when complete  
We will obtain all permits and complete "Call Before You Dig" prior to prep

***Thank you for inviting us to bid on your project.  
I'd like to take a moment to tell you about my company.***

In the summer of 1987, I finished my final school exam at Watertown High at 11:00am. I had just been hired by a local paving company and was on the job by 11.30am. I remained employed for this company for a number of years and my knowledge of the paving industry grew.

Over time, I began to realize this industry was plagued by rip-off artists, gypsies and fly by night contractors. This even included my own employer! I recognized the need for a reputable and honest paving company that could give customers the experience they deserved.

In 1993, I decided it was time to act on my vision. I could no longer continue to work for a company that misled customers and didn't deliver on its promises. Deziel Paving, Inc was started with an old dump truck, a 1969 asphalt paver, two employees, and a commitment to being a better business!

Each year I was able to afford better equipment and add employees. My vision has slowly come to life. We are now in our 27th season, with over \$1,000,000 in value of the finest paving equipment available. Our expert team includes a full-time office manager, a full-time estimator, a full-time prep crew and a full-time, eight man paving crew. Everyone is dedicated to ensuring long lasting paving work...and relationships.

**WE ARE:**

- **First in the area to offer a 24 month warranty on all new base and driveway installations.**
- **First to provide our customers with material tickets at your request. Guaranteeing you get what you pay for.**
- **We are a professionally staffed company ready to work with you on your project from design to completion.**

I founded the company on a commitment to excellence. We achieve the excellence through integrity, dedication and commitment to our customers. Please feel free to contact our office from 9.00 am-3.00 pm to speak to our office staff if you have further questions or need a list of Deziel driveways in your area.

**860 -283- 4140  
235 E Main St,  
Thomaston, CT 06787**

**I guarantee  
your satisfaction!**
